PROFILE

Senior Product Engineer (Java Backend Developer) with 4.5 years of experience designing and optimizing scalable backend systems using Spring Boot and Microservices. Recognized with the 2023 Excellence Award for ownership of complex and partially transitioned modules, delivering high-quality solutions with minimal supervision, and contributing to critical business initiatives. Skilled in building and optimizing REST APIs, reducing execution times from minutes to seconds through parallel processing and batch queries, accelerating search operations with database indexing and resolving high-priority production incidents. Proficient in PostgreSQL, JUnit, and Mockito, with experience working in Scrum-based Agile teams and mentoring junior developers.

TECHNOLOGIES

- Languages: Java
- Database: PostgreSQL, DynamoDB
- Testing Tools: JUnit, Mockito
- Build Tool: Maven
- Version Control: Git, Bitbucket
- Collaboration Tools: JIRA, Confluence
- Frameworks: Spring Framework, Spring Boot, JPA, Hibernate
- Architecture & API Development: Microservices, RESTful APIs
- Cloud Platforms: AWS (EC2, S3, RDS, Lambda, IAM)

EXPERIENCE

Senior Product Engineer, 02/2022 - Current

IBS Software – Kochi, India

- Designed and developed scalable, high-performance backend systems using Java and Spring Boot for airline solution products, ensuring reliability and performance under high transaction volumes.
- Took ownership of a legacy Java EE application, resolving critical production defects with 90% accuracy and improving overall product quality by 20%.
- Optimized crew recency update process by parallelizing computation across multiple crew IDs, reducing execution time from 25 minutes to under 5 seconds for 981 records, significantly enhancing scalability.

- Reduced database overhead by consolidating individual save, delete, and search operations into single batch queries, leveraging in-memory Map structures for efficient data lookup and processing, cutting redundant calls and boosting performance.
- Accelerated search operations by introducing database indexing on frequently queried fields, reducing lookup times and improving responsiveness in high-volume crew data processing.
- Worked on CI/CD pipelines using Jenkins to automate build, test, and deployment processes across environments.
- Followed Agile methodologies to deliver high-quality software within strict project timelines, actively participating in sprint planning, reviews, and retrospectives.
- Collaborated with cross-functional teams including QA, product, and support to design and implement efficient, business-aligned solutions.
- Performed end-to-end testing and proactively identified pre-release defects, enhancing product stability and reducing production incidents.
- Provided onsite production support in South Korea for one month, directly addressing client queries and ensuring smooth system operations.
- Actively contributed to the Hotfix team for six months, resolving high-priority production bugs and reducing customer-reported issues.
- Provided on-call support for immediate requirements, ensuring minimal downtime and quick recovery during critical incidents.
- Awarded the Excellence Award (April 2023 – September 2023) for outstanding technical contribution, ownership, and delivery excellence.

EDUCATION

Master Of Computer Applications: 01/2022

Mar Athanasios College for Advanced Studies Tiruvalla (MACFAST) - Tiruvalla, India

Bachelor Of Computer Applications: 04/2019

Kristu Jyoti College of Management and Technology (KCMT) - Changanassery, India
